,	s but not actions/changes
	ommits but not actions/changes
git revert commit_id used to delete a particular	commit action and add a new commit for the change
git branch used to see the list of bran	ches
git branch branch-name to create a branch	
git checkout branch-name to switch one branch to an	
git checkout -b branch-name used to create and switch	other
git branch -m old-branch new-branch used to rename a branch	

git branch -d branch-name	to delete a branch
git branch -D branch-name	to delete a branch forcefully
git merge branch	copy the all commits from one branch to another
git cherry-pick commit-id	copy the single commits from one branch to another
git mergeabort	used to cancle the merge when conflicts arise
git rebase branch	copy the all commits from one branch to another
git stash	to delete the changes permanently
git stash save "message"	to save the stash along with the message
git stash apply	to get back the data again
git stash list	to get the list of stashes
git stash clear	to clear all stashes
git stash pop	to delete the first stash
git stash drop	used to delete the latest stash
git stash drop stash@{2}	used to delete a praticular stash
git remote add origin repo-url	link local-repo to central-repo
git remove -v	used to get the linked repo in github
git push -u origin branch-name	push the code from local to central
git push -u origin branch-1 branch-2	used to push the code to multiple branches
git push -u originall	used to push the code to all branches at a time
git clone repo-url	used to get the code from central to local
git pull origin branch	used to get the chanes from central to local
git fetch branch-name	used to fetch the data from central to local
git fetchall	used to fetch the changes from all branches in github
git merge origin/branch	used to merge the changes from cental to local
git push -u origindelete branch-name	used to delete the github branch from local
git remote rm origin	used to unlink the github-repo
Git remote rename old -link new-link	used to change the repo
